# Power Bank con doble puerto USB de carga + USB C

**POWER2P**

## About this user manual
Thank you for purchasing a portable mobile power, which is a compact, lightweight, portable multi-function power system to facilitate you go out or travel, no matter in any environment, immediate charge your portable electronic product. The note describes how to use this product and important safety issues, please read and retain this manual for future reference.

## Important safety precaution
1. Mobile power is the first time use or long term storage before use, the mobile power host may have been automatically discharged gradually and fully charged before you use it, please note, it normally takes two or three times the complete charge and discharge cycles, the initial usealfter in order to achieve optimal performance.
2. Please use the specified charger approved accessories, including adapter charging cable and transmission.
3. Use without power chargers and accessories can be, it may damage to your portable electronic products and mobile phones the source of the machine.
4. Charge, should be in the position of the ventilation is too high or too low temperature the degree will affect battery performance.
5. Do not put this product on the water. Light or damp rain cream.
6. Do not drop, strong beat, vibration or shake the production products, or it may undermine the internal precision components and intact structure.
7. Please keep this product and related accessories, to avoid home easy reach of children.
8. Charging the mobile power hosts a slight fever, which a normal phenomenon.
9. Do not use mobile power hosts close to the source of fire or other heat source (such as cooker). Please note the source how to use this product and important safety issues, please read and retain this manual for future reference.
10. Avoid allow metal objects to contact the host of mobile power charge and discharge the jack, or will cause short circuit, damage host.
11. Unauthorized product alteration or repair their own may cause, you are unable to use this product and void the warranty.
12. Accordance with local laws, articles of association and limitations, appropriate use of mobile power host encounterwithout permission, such as the landing of aircraft or in the vicinity of medical equipment, should be avoided charging, and the need to immediately turn off your cell phone or other electronic product in order to avoid interference.

## Product overview
1. Power port
Micro USB for mobile power charging.
2. Power output interface
Type-A USB interface output to other devices.

## Charging power station
1. USB-DC3.5 output, line and Micro USB adapter to charger the mobile power available power adapter or computer USB charging for mobile power, the blue

indicator shows the mobile power.
2. If the initial use (or after long-term storage when used), first mobile power charging activated three times before charging time is approximately 20 hours o'clock, after only 8 hours to charge, power before they achieve the best results, the process of charging mobile power blue lights.

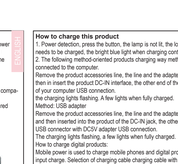
## To charge other devices
With a mobile power supply is used for communication digital products rechargeable DC-5V input, equipped with a variety of connection fitting, compatible with most mobile phones and digital communications equipment.
When connected to an external device, the red indicatorlight power, the red indicator turn off when the power consumption.

## How to charge this product
1. Power detection, press the button, the lamp is not lit, the low battery needs to be charged, the host light blue when charging continue to use
2. The following method-oriented products charging way method one: connected to the charging cable
Remove the product accessories line, the line and the adapter is connected, and then in insert the product DC-IN interface, the other end of the USB connector of your computer USB connection.
the charging lights flashing. A few lights when fully charged.
Method: USB adapter
Remove the product accessories line, the charging to the mobile power is connected, and then inserted into the product of the DC-IN jack, the other end of the USB connector with DC5V adapter USB connection.
The charging lights flashing, a few lights when fully charged.
How to charge digital products:
Mobile power is used to charge mobile phones and digital products with DC-5V input charge. Selection of charging cable charging with a variety of connection first wife or the products equipped with charging and discharging interface (different devices to choose a suitable adapter).

## Maintenance
1. The body type of this product, classic elegance, easy to carry, proper maintenance. Following the construction of meeting there and in the extended use period.
2. Please keep this product dry, rain, moisture and liquids will corrode electronic pieces and lines
3. Do not use this product on the heat, high temperatures can shorten the life of electronic devices. Lose bad batteries, and some plastic aging, of even explode
4. Do not drop, knock the product, rough handling may damage the internal electrical circuit boards.
5. Do not attempt to disassemble your product

## Precautions
1. The first use you this product is fully charged, four light continue to charge for 20 minutes.
2. When using this product, please electronic device screen opens, confirm the charging connector flag correctly to guarantee that the products have been working properly
3. In the electronic equipment in the charging process, the blue power indicator goes out, indicates that this product is low battery need to charge for this product.
4. Electronic device is fully charged, the output cable pulled out, avoid free power loss.

## Security features
1. The intelligent control system, multiple protection (charging control charging protection discharge protection, overload protection, short circuit protection)



USB 5V output design with ultra-high compatibility with international standard, compatible with the USB charging device.
Wide voltage input internal smart chip buck protection, as long as the input voltage DC 4.5V-20V, regardless of the current size, can be directly on the mobile power charge, without having to worry about charging and electricity security worries.
LED indicators, input charging full instructions, the output power indicator, battery the charge indicator, make the product more simple and clear LED indication!
